SUMMARY

I am a Master's in Computer Science graduate with 2+ years of experience in software development, distributed systems, and data engineering. Skilled in Python, SQL and Linux, with experience in full-stack development across cloud platforms.

EXPERIENCE

Certa.ai

July 2025 – Present

Software Engineer Intern, Partner Engineering

San Jose, CA

- Developing features for backend services using Django, FastAPI and PostgreSQL to power a third-party risk management platform.
- Implemented logic in a serverless pipeline (Python, AWS Lambda, SQS) to handle OpenAI API responses, ensuring outputs are reliably returned as structured JSON.
- Migrated 100+ GB of MongoDB data to a new environment using batch processing ETL scripts in Python, achieving zero downtime.

Ninedot Energy

June 2024 – August 2024

Software Engineer Intern, Data Team

New York City, NY

- Automated and migrated financial computations to BigQuery via a robust data pipeline, using dbt for data transformation and Fivetran for data integration and loading, enhancing data accuracy and efficiency within the GCP environment.
- Utilized Google Cloud Functions and Github Actions to ingest and process API data, integrating Fivetran for ETL (Extract Transform Load) pipeline synchronization of metadata and energy storage metrics.
- Implemented enterprise-scale data modeling in dbt, designing and developing multi-layered transformation models (staging, intermediate, marts) on BigQuery for advanced analytics capabilities.

NTT Data

August 2021 – October 2022

Cloud Engineer - ETL

Pune, India

- Developed automated job dependency analyzer in Python to parse workflow documentation, extract dependencies, and generate optimized DAG schedules, reducing manual effort by 70%.
- Built data pipeline implementing CDC (Change Data Capture) using Snowflake Streams and Tasks, enabling incremental data loads, reducing ETL runtime by 40%, and cutting compute costs through automated, event-driven processing.
- Migrated legacy Microsoft SQL Server database with 10 TB+ of data to Snowflake, a cloud data warehouse, including all stored procedures, triggers, and ETLs, resulting in a 30% reduction in infrastructure costs.
- Optimized query performance by up to 40% and eliminated redundancy in the legacy data model, resulting in a 25% increase in report generation speed.

EDUCATION

MS in Computer Science & Engineering

September 2023 - June 2025

Santa Clara University (GPA: 3.61 / 4.0)

Santa Clara, CA

Coursework: Distributed Systems, Computer Architecture, Internet of Things, Object Oriented Design

BTech in Computer Science & Engineering

September 2017 - Aug 2021

NIIT University

Rajasthan, India

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript, C, C++ , HTML, CSS

Frameworks & Libraries: Flask, Django, Numpy, Pandas, FastAPI, OpenCV, PySpark, Express.js , Node.js

Databases & Tools : SQLite, PostgreSQL, Snowflake, MongoDB, DynamoDB, Unix/Linux, Git, Shell scripting, Redis

Certifications : [AWS Solutions Architect](#)

PROJECTS

GitLlama: AI-Powered Git Repository Assistant | *React, Flask, Together AI, Pinecone, Git, Python*

- Developed an AI-powered chatbot for Github repositories, improving developer productivity with commit summarization and repository analysis.
- Recognized as a top 4 project in the Llama Impact Hackathon sponsored by Meta & MindsDB.

Literature Research Tool Full Stack Web Application | *Python, Flask, HTML, CSS, Javascript, Bootstrap*

- Developed and deployed a full-stack web application using Python and Flask to facilitate academic literature research, enabling users to search and access papers based on various criteria
- Implemented robust web scraping techniques, including proxy server rotation, to aggregate academic articles from multiple sources like Google Scholar, ACM, and Semantic Scholar, ensuring continuous data retrieval.

AI Based System Design Builder | *Python, NVIDIA AI Workbench, Javascript, D3.js, HTML, CSS*

- Built AI-powered platform for generating and visualizing system architectures with NVIDIA AI Workbench.
- Created a user-friendly interface with manual design, AI assistance, voice input, and visual graphs, selected as one of the top 30 projects in HackAI - Dell and Nvidia Hackathon Challenge.
